Summary Cybersecurity Engineering graduate with hands-on experience in Web Application and Network Vulnerability Assessment and Penetration Testing. Skilled in identifying and exploiting vulnerabilities using tools such as Burp Suite, sqlmap, Nmap, OWASP ZAP, and DVWA. Strong understanding of SQL Injection, authentication flaws, misconfigurations, and secure coding practices. Experienced in Python scripting, enabling deeper insight into application security. Passionate about ethical hacking, exploit development, and strengthening system defenses.

Experience **Texial**

VAPT trainee (September-November, Bangalore)

- Completed comprehensive training focused on both manual and tool-based security testing across web applications, networks, and system infrastructures.
- Completed comprehensive CEH-based training covering all core modules.
- Performed hands-on exploitation on DVWA, Metasploitable2.
- Performed web exploitation using Burp Suite, OWASP ZAP, sqlmap, Cookie manipulation, Payload-based testing.

EyeQ Dot Net

Student Internship (June-July 2024, Mangalore)

- Worked on identifying and understanding common vulnerabilities such as SQL Injection and Cross-Site Scripting (XSS).
- Focused on web application security and studied OWASP guidelines during the internship.
- Leveraged Google Dorking techniques for information gathering and reconnaissance.

National Institute of Technology

Student Internship (August-September 2023, Mangalore)

- Worked with OpenSSL to generate and match hash functions for files and web pages.
 - Explored browser internal functionality, including how browsers process, interpret, and render web content.
 - Attempted to develop a hash-matching algorithm within the browser; although it wasn't successful, it significantly enhanced understanding of cryptography, hashing mechanisms, and browser internals.
-

Education **Srinivas University Institute of Engineering and Technology**

Cyber security and Cyber forensics

7.5 CGPA

2021-25

B TECH

Project **ANTI -THEFT MOBILE APPLICATION**

As part of my final year project, I co-developed an Anti-Theft Mobile Application using Kotlin, Node.js, React, and Firebase, aimed at enhancing mobile device security through features like real-time GPS tracking, geofencing and remote command execution (lock, alarm). The system followed a distributed architecture with Firebase backed authentication, cloud messaging, and Firestore integration

Skills **Security testing and Exploitation**

- Network Scanning and Enumeration (Nmap), Splunk, Metasploit, Burp Suite, SQLMap, Hydra, Wireshark, Vulnerability assessment(Nessus).
- Experience with OWASP top 10 vulnerability and API security testing.
- Basic understanding of secure coding practices and Cryptography fundamentals.

Scripting and Automation

Python, shell scripting, payload deployment and reporting workflows.

Systems and Protocols

Kali Linux, Windows and VMware, TCP/IP, Firewalls and HTTP/HTTPS

Certifications

- Linux Fundamentals
- Introduction to Cyber Security (CISCO)
- Career Essentials in Cybersecurity (LinkedIn and Microsoft)
- Texial information security auditor certification (TISA)
- Web Development (Apna college) Issued on Aug 2024
- ISO 27001:2022-Compliant Cybersecurity
